

All the care your heart needs. Under one roof.

Your journey to heart health begins through a single door.

Specially designed for collaboration and information-sharing, Mercy's Heart Hospital gathers specialists in every cardiovascular area into one facility, so that we're looking at your heart health from every perspective.

Here, cardiac experts work together to diagnose and treat conditions including atrial fibrillation (AFib), congestive heart failure, coronary and peripheral artery disease, high blood pressure and heart attack.

The Heart Hospital provides a full slate of preventive care as well, with:

- Specialists who screen for risk factors
- Nutritional guidance for a heart-healthy diet
- Instruction on lifestyle changes and exercise regimens to keep your heart healthy

Your life is our life's work.

The most advanced cardiovascular technology currently available – including two full electrophysiology rooms and nuclear cardiac imaging – lets us perform minimally invasive, non-surgical testing and shorten testing time by 75%.

And a full on-site recovery suite ensures that every step of your journey to heart health – from prevention and testing to treatment and recovery – takes place under Mercy's watchful care.
